- Ø Communication
- Ø Punctuality
- Attention to detail

IZZAH FATINI BINTI MOHD NASRI

At work, we use what you know to deal with real-time challenges. In university, we mostly learn and practice without the pressure of real-life situations. Other than that, during studies the focus leans towards theoretical foundations, while in the work, the primary emphasis is on applying practical knowledge to address real-time challenges.

SUMMARY

To wrap it all up, ICT industry is definitely an emerging industry and there is a high demand in ICT related jobs. Through this industrial talk by Clarity Techworks, we know that ICT is an emerging industry and we can see many potentials in the future. Thus, choosing computer science as a future career path is a good decision that brings us a big step towards the goal. Being a degree holder after we graduate of course is the priority task for each of us, but a degree doesn't mean everything in the future world. To have a secure job in the future ICT industry, we should also equip ourselves with other soft skills. Through this talk, we can also keep ourselves motivated and have passion in our areas of expertise.

REFLECTION

Overall, the team has learnt that in an ever evolving field, we should always keep on top of new technologies and always be adventurous to try new things. Upskilling is important and can be done through various means, such as online webinars and courses. Aside from that, working on projects, posting them and revisiting them with new knowledge will also be beneficial for us to improve our skills. Our team is greatly motivated to keep improving and advancing in the field using the knowledge that we have gained from the talk.
